EDUCATION

Simon Fraser University

September 2026 (expected)

Bachelor of Science

- **Relevant Coursework:** Data Structures/Algorithm, Object-oriented Computing, Unix Tools/Scripting, Program Design, Web Programming, Databases, Data Science, Regression analysis, Networking, Discrete Mathematics

EXPERIENCE

Vancouver.dev

Sep 2024 - Present

Community Manager

- Organized biweekly tech events and secured corporate sponsorships for community initiatives; coordinated monthly social events for Vancouver Tech Week
- Engaged with the community while marketing initiatives; created and scheduled posts on LinkedIn, Discord, and Instagram
- Managed the Luma event page to handle invitations, coordinate participants, and monitor registration

Code Ninjas

Sep 2024 - Present

Administrative Assistant / Assistant Center Director

- Managed daily operations of a coding center, supervising curriculum delivery for over 10 students per day
- Consulted with parents on course selection and provided regular progress updates
- Assisted students with projects in **Microsoft MakeCode**, **JavaScript** and **Unity** offering guidance and support

Simon Fraser University Robot Soccer Club (SFURS)

Sep 2024 - Present

Software Developer

- Developed autonomous soccer-playing robots using **C++**, **Python**, and **SSL Vision** for object detection, along with **Network I/O** for communication
- Identified and resolved code errors submitted by team members, improving system stability and performance
- Redesigned the game interface with **CLion**, improving the user experience during game simulations

Langara College Computer Science Club

Jan 2024 - Sep 2024

Hackathon Lead Coordinator

- Organized Langara Hacks 2024, bringing **100+ participants** together for a 30-hour coding competition
- Secured sponsorships from Samsung and Microserve, managed event logistics and coordination
- Contributed to Langara's first-ever hackathon as part of the organizing team, helping establish it as an annual event and supporting its growth over two years

PROJECTS

SoundSurf Web Browser

October 2024

StormHacks 2024: **Winner, Best Social Hack**

JavaScript, HTML, CSS, Python, Electron.js, FastAPI, GPT-4, Whisper

- Developed a **voice-command web browser** enabling hands-free computer control for users with limited mobility, addressing accessibility challenges.
- Built the interface using **Electron.js**, integrated OpenAI **Whisper** for speech-to-text processing, and implemented **FastAPI** with **GPT-4o-mini** for **HTML parsing** and user interaction. Enhanced voiced clarity with a **fluent-ffmpeg** noise filter and deployed the project with Defang for scalable functionality
- Conceptualized, designed, and led the project as PM, collaborating with two teammates to maximize contributions. Secured the **Finalist** award and received recognition from the Chief Operating Officer of Brave Technology for creating **the most impactful social good** hack, winning the Best Social Good Hack prize

Studylingo Chrome Extension | Hack The North 2024

September 2024

Hack The North 2024: **3rd Place – Best Use of Cohere, Best Use of Defang**

React, Python, FastAPI, Cohere, Defang, HTML, CSS, JavaScript

- Built a Chrome extension to support studying by reducing passive reading time and minimizing repetition, helping users with ADHD stay focused
- Used **React** for Chrome extension, **Python** with **FastAPI** for integrate **Cohere AI** for web summarization, content analysis, and AI-generated quizzes, while implementing a Pomodoro timer to boost productivity and focus, and deployed the backend with **Defang**, enabling smooth and scalable cloud deployment
- Collaborated with three SFU students at **Canada's largest hackathon** with **1,000+ participants**, securing **two prizes** after competing against 70 teams for the sponsorship prize, including teams from Waterloo and universities worldwide

YogaMate

May 2024

StormHacks2024: **Best Health/Wellness Hack**

Next.js, Tailwind CSS, Python, OpenAI API

- Built an AI-powered yoga fitness app that generates personalized yoga plans and incorporates text-to-speech for enhanced user experience
- Utilized Next.js and Tailwind CSS for front-end development, integrated the OpenAI API for personalized plan generation, and used ElevenLabs to generate the text-to-speech functionality. Python was employed for backend functionality.

The Cybercare Defender

December 2024

Technation (Enhancing Cybersecurity Culture and Resilience Challenge) - **3rd Place**

- Proposed an AR-based **cybersecurity training strategy** using **Microsoft HoloLens 2** and **TensorFlow**, securing third placed against master's-level teams
- Designed a gamified Cybersecurity Credit Score System to boost employee security awareness and compliance while developing a framework leveraging Microsoft **HoloLens2** and **TensorFlow** to enhance security awareness, compliance, and real-time vulnerability detection
- Developed a financial model projecting revenue of CAD \$210k-\$300k with profit margins of 26-30%, demonstrating strong potential for national implementation

TECHNICAL SKILLS

Languages: Python, C++, R, HTML, CSS, JavaScript, Matlab Java, PHP

Frameworks/Libraries: React, Node.js, Next.js, TensorFlow, NumPy, Pandas, PyTorch, Matplotlib

Tools/Databases: AWS, Git, GitHub, Visual Studio Code, Figma, Canva
